

10 advantages of Cloud PLM for your product development

CONTACT
CIM Database Cloud

1

More flexibility

Cloud PLM adapts to your team size. The scalable software allows you to add or remove licenses at any time.

Adapted to your needs

You choose from standardized and preconfigured function modules. Companies with special requirements have the option of customizing the software individually thanks to Cloud DevOps services.

2

High interoperability

You can connect your Cloud PLM conveniently with the software tools and applications that you already use. Integrate MCAD, ECAD, ERP, MES, CRM, MS Office, and more.

3

All functions and tools in one

With Cloud PLM, you get powerful functions that are essential for an innovative and digital product development.

4

Precise cost calculation

A licensing model that also allows usage-based billing via pay-per-use ensures flexibility, transparency, and predictability.

5

Maximum data security

Large cloud infrastructure providers offer a wide range of IT security services. In the cloud, your data is protected from hacker attacks.

6

Immediately ready to run

Cloud PLM does not require a local installation. You can use the software directly, thanks to a no-code approach with standardized and preconfigured modules.

7

Less effort

Software updates and patches are automatically installed. You save valuable IT resources.

8

Available anywhere and anytime

24/7

Cloud PLM enables more efficient collaboration. Employees can access the software and share documents regardless of location and time.

9

No more data chaos

With Cloud PLM, every employee has access to a central data source, the “Single Source of Truth”. You create a digital home for your product development data.
